

Dear Chairman Phillips and Commissioner Beverly,

2050 is too late. The disastrous impacts of global warming and climate change are happening now. We need to move to 100 percent clean energy now. Utilities as profit-making enterprises with the goal of big CEO salaries and stockholder dividends should not be the objective at the expense of clean air to breathe and a healthy and green environment.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Deborah Ziska

455 M Street NW Apt, Suite, Bldg.

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

All of us in DC have the responsibility to keep our communities healthy by phasing out dirty fuels. Now is the time to make it clean fuel happen by taking responsibility.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Maya DeHart

1415 Hopkins St NW, Apt 1

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

As a DC resident, I ask you to ensure any plan you approve Washington Gas moves forward with deep decarbonization and phase out fossil fuels, including "renewable" natural gas.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Sincerely,

Lena Moffitt

1626 NICHOLSON ST NW

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

As a longtime DC resident and climate activist, I am proud of DC's leadership on climate change, and its commitment to become carbon neutral by 2050. Unfortunately, Washington Gas's climate business plan is not in step with that goal. It proposes to address greenhouse gas emissions from its use and sale of fracked natural gas through addressing pipeline leaks, enduser efficiency, and the replacement of a small percentage of fracked gas with biomethane. These are all important steps, but the plan's proposed investment of lots of money in pipeline infrastructure would ensure that DC continues to rely on fracked gas for the foreseeable future. What DC really needs to do in order to meet its longterm climate goals is make a plan to get off of fossil fuels altogether.

Please reject the Washington Gas "climate business plan" and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Sincerely,

Stephanie Klein

1100 Euclid St NW

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

As a utility that is supposed to work in the interests of DC citizens, Washington Gas's "climate business plan" should be about improving the climate for Washingtonians. But their plan will waste money and lead to more pollution and global warming. We city residents will have to pay the bill and be stuck with a worse environment. Please reject their plan and demand they have an open process where experts and the community have input and a voice in what actions will be taken! Thank you.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. Sincerely,

Sarah Fichter

4607 Connecticut Ave NW Apt 308

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

I don't understand this because I thought all DMV utilities had plans to reach carbon neutrality by 2050.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Patricia Burke

5044 Fulton St NW

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

I have a young son and I am deeply concerned about climate change. I also read recently about the dangers of burning gas indoors and urge you to act to support DC residents electrifying their households to improve air quality.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Keya Chatterjee

1212 Wylie St NE

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

I previously submitted comments to the PSC and DC Councilmembers via Food & Water Watch. Its not that using biogas is a bad thing - it should not, however, count toward reducing greenhouse gases emissions - because it will not.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Jim Schulman

631 E St NE

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

I request that you reevaluate your climate impact plan based on the enclosed considerations.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Chris Key

950 Maine Ave SW Apt 407

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

I urge you to make Washington Gas take as many steps as possible to honor their carbon neutrality commitment. So many individuals do not have the luxury of opting for more sustainable yet more expensive forms of energy, food, transportation, etc. The only way to achieve the kind of positive change urgently needed on climate action is if companies in every sector step up to the plate and can find a real, sustainable path forward.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Kylie Teller

2111 4th Street NE

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

I'm deeply concerned by Washington Gas' attempt to flout its agreement and its total disregard for DC's climate and carbon reduction commitments. The plan that Washington Gas has put forward not only fails to achieve its purpose of emissions reduction or a renewed business model, it would increase, perhaps quite significantly, costs for DC ratepayers who already pay too much to support the company's carbon intense business model and pad the pockets of this polluting corporation and its executives over the interests of the people of DC. This plan takes no meaningful action on emissions reduction or climate commitments--it is out of step with every governing body in DC, including the PSC. The PSC must fulfill its duty to the public interest and reject this dangerous, dirty, and costly plan.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Matthew Gravatt

626 3rd St NE

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

Investment in electrification rather than propping up a fossil fuel company with ratepayer subsidies will better serve the District's clean energy commitments.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Sincerely,

Carole Lewis Anderson

3616 Reservoir road, nw

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

It's important for citizens to pressure local utilities to get more ambitious with climate solutions. The science is clear that we must do all we can to electrify heating in the U.S. as soon as possible. Decarbonizing heat is more difficult than decarbonizing electricity, but we should look at some of the district heating systems used in some European cities and doing our best to electrify our heating system here in DC. We will need action from both utilities like Washington Gas and regulatory action from the city to make this happen!

Good article here: <https://carbonneutralcities.org/thermal-decarbonization-of-buildings-heating-and-cooling-systems/>

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Aria Kovalovich

450 Massachusetts Ave

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

Le't make America Great... and Smart again!!

Thank you for thinking of your / our grand children :)

With gratitude,

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Sincerely,

Nicola Hayes-Allen

709 I St NE

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

My family has lived in DC for decades and my passion for this city runs deep. My grandfather is a retired bridge and tunnel engineer here in the city. In his lifetime, this city has made great strides for a climate positive future, but I worry that there are decisions on the horizon that could dampen the future I and my future children see.

In order to ensure our city has a long-term future, one that our children and grandchildren can live in and enjoy, we must be taking the steps NOW to move to clean and renewable energy sources. I've spent the past few years analyzing the burgeoning offshore wind energy industry along the east coast, for example, and this forward thinking renewable energy solution, coupled with land-based options from solar and wind electricity, should be where DC is heading, not gas from manure.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

2619 Garfield St NW #2

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

There is no excuse for heading in the wrong direction. Clean energy ? which does not include fracking ? is necessary, and there is no time to lose. Washington Gas must be held responsibly to its commitment.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. DC must move to clean and renewable energy sources, like electricity from wind and solar, not expensive and unrealistic schemes like burning gas from cow manure.

Washington Gas is evading its agreement to meet DC's commitment of carbon neutrality. The company is asking DC ratepayers to subsidize expensive and polluting energy sources that will hurt DC families while profiting Washington Gas shareholders.

Please reject the Washington Gas "climate business plan" and its expensive manure gas scheme and instead open a proceeding on how Washington Gas will comply with DC's climate commitment of carbon neutrality by 2050.

Sincerely,

Ellen Steury

2800 R St NW

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

This "plan" is not actually aligned with DC's commitment of carbon neutrality by 2050. As a citizen of the District and a Washington Gas customer, I expect better service from you.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Sincerely,

Marcelle Empey

1111 Lamont St NW

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

This is especially important for local governments to regulate as we do not have a supportive administration at the federal level. I urge you to consider alternative options to set the District up for success.

Thank you!

Katelyn Manfre

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

Washington, D.C. can and should be a model for the nation. If we are to combat climate change, we need to act boldly and immediately. This is not only for the planet, but for our local environment. Many of us in D.C. are at sea level and are concerned about the impact of sea level rise on our homes. And , we are suffering the consequences of hotter and hotter summers in the region.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. Collin Rees

1465 Harvard St. NW, Unit 402

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

While I sympathize w/ the fact that a gas company wants to sell gas, they are not the future of energy in this country. It is incumbent on them to innovate or be phased out.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it. Sincerely,

Robert Robinson

1631 Newton Street NW

Washington, DC

Dear Chairman Phillips and Commissioner Beverly,

You say you will become carbon neutral by 2050 and transition away from fracked gas and toward a sustainable business model. But instead, your manure gas plan would increase costs on DC families and businesses by as much as 10 times, while continuing to emit carbon pollution and indoor air pollution that is linked to asthma, diabetes, cancer, and premature death. Please your promises and stop polluting. Our community deserves better.

Climate change is a severe and growing threat to DC and we must act by moving to 100% clean energy as soon as possible. Burning gas to heat our homes and other buildings is a major health threat to children and families in DC and to our climate.

Washington Gas has committed to complying with DC's climate commitment of carbon neutrality by 2050, but the gas utility's "climate business plan" goes in the opposite direction by doubling down on expensive investments in gas pollution and the infrastructure that supports it.
