Subject: Is gas killing our plants?

The street in front of my house has been dug up 4 times in the past 2 years. It is about to be dug up again.

I have a concern - In the sidewalk in front of my neighbor's house is a grill, clearly marked "Pepco", but clearly venting from below ground. Over the last 9 months, the two evergreens in front of my neighbor's house have browned and died. Current browning is visible on plants in front of her home.

Doesn't it make sense to check for potential signs that gas might be killing local plants that are situated in similar locations? If not, why not?
